

[Manual Vs Automatic Nibp](#)

Features

1. Convenient and easy to clean
2. TPU material, latex-free, very soft and smooth surface and material
3. Using for patient blood pressure monitor, wrap around the arm
4. compatible with Mindray, CSI, Spacelab, Philips/HP, Nihon kohden, Biolight, Edan, Drager, Siemens, Colin monitor (Suitable for single tubes ;requires different nibp connectors)

Customer notice:

- a. The cuff we sell does not have connector, If you need other connector, you can choose to buy the matching connector in our shop.
- b. The cuff can be fitted with different extension tubes depending on the device.
- c. Different equipment is required to match different extension tubes and nibp connectors.

Certificate

leaning and disinfection

Product must be thoroughly cleaned with the specified detergent before reuse. The additional use of household bleach as described below provides at least low level disinfection.

- Blood Pressure Cuffs, Air Hoses, Adapters, and Connectors have been subjected to 3 successive applications of the following cleaning/disinfection method with no apparent negative effect. While this procedure is adequate for disinfection, it may not remove all stains
- Care must be taken to avoid liquid ingress into the cuff tubing, air hose openings and inflation system valves. Liquid in the airway may affect blood pressure determination accuracy and damage automatic or manual monitors.
